

# Get into the swing of things

# Single Point Swing

The Sutcliffe Play single point swing has a 3.1m swing height that provides an exciting long swing range.

The all stainless steel bearing unit provides movement in all directions as well as rotating for a dynamic play activity.

The large dedicated all rubber safety seat provides inclusive play opportunities. Designed so that children of all abilities are able to use the swing, to enjoy and embrace dynamic or gentle movement.

The large seat allows groups of children to play together and also allows both carers and parents to access the swing with ease, enabling them to support less able or young children during use.

The shape of the swing seat also allows children to get on and off more easily than a traditional tyre seat.
